

### **1.0 ChattyClient application:**

Download ChattyClient installer from the official website, follow the instructions on how to install it, log in using existing twitch account and in a pop-up, window put in the name of the channel you want to join.

Link: <https://chatty.github.io/#download>

### **2.0 Tables PDF**

This document contains tables with numbers used to produce graphs. There are 2 tables per streamer. First table is vod numbers and second is clips numbers.

### **3.0 Findings.py**

This is the code that I used to filter the collected data. The basic idea of the code is to read a file count how many times each word was used and print out the most commonly used words from the most common to the least. The amount of words returned are specified in the code and can be changed. (most\_common (500) where number can be changed to any other number)

This code works with any version of python installed.
